Advanced Treatment for Cataracts

LASER SURGERY CAN FREE YOU FROM WEARING GLASSES

Vision that is clouded by cataracts can put a damper on life. Fortunately, with laser cataract surgery, you can enjoy clear vision once again—and ditch your glasses after the procedure.

The new LenSx laser brings a new level of accuracy and precision to cataract surgery and, at the same time, can correct astigmatism. This new technology, combined with advanced lens implants, can leave you with near perfect vision.

Learn how this recent advance in cataract surgery can help those with nearsightedness, farsightedness, presbyopia (age-related vision loss) or astigmatism stop relying on glasses or contact lenses.

TWO CHANCES TO HEAR THIS FREE LECTURE:
